

## Children With and Without Voice Problems Needed for Research Study

Researchers at the University of Kentucky College of Health Sciences are conducting a research study to gather data on the vocal fold movement. The goal of this research is to study the vocal fold movement patterns of children and adult voices with a new technology called the high-speed digital imaging. Information from this study will help us better evaluate and treat voice problems in children and adults.

Your child may be able to participate if:

- they are 5 to 11 years of age;
- they have normal voice; or
- have a voice problem.

Study participants will be compensated.

Location: Room 116F, Charles T. Wethington Building  
(Vocal Physiology and Imaging Laboratory)

Research Investigator: Rita Patel, Ph.D.
