

Volunteers Needed for Gum Disease Treatment Research Study

The faculty and staff of the University of Kentucky College of Dentistry Center for Oral Health Research are conducting a clinical research study on the treatment of gum disease.

You may be able to participate if you:

- are between the ages of 18 and 75;
- have, or suspect that you have, gum disease; and
- have deep gum pockets associated with your gum disease.

This study will evaluate the effects of treating gum disease by combining a deep cleaning of gums and teeth with a new formulation of the FDA-approved drug Periostat[®].

Qualified participants will receive compensation for completing the study, and all study treatments will be provided at no cost.

John Novak, B.D.S., Ph.D., is the investigator for this study. If you are interested in learning more about this study, please call Lisa Johnston at **(859) 323-4923**.
