Produced by Kentucky Injury Prevention and Research Center as bona fide agent for the Kentucky Department of Public Health. October 2019.

Methodology: Each county was ranked by combination score based on mortality and morbidity indicators. The mortality indicators included the number and crude rate of fatal drug overdoses. Morbidity indicators included the crude rate of drug overdose emergency department encounters and the refusal rate per 10,000 emergency services runs where the patient decline transport to the emergency department.

Data Sources: Kentucky Death Certificate Database, Kentucky Office of Vital Statistics, Cabinet for Health and Family Services; Kentucky Administrative Discharge data, Kentucky Office of Health Policy and Analytics; Emergency Medical Services data, Kentucky Board of Emergency Medical Services.
